
COMPUTER SUBJECT: BASIC ML CONCEPTS

TYPE: GROUP WORK EXERCISE/DISCUSSION

IDENTIFICATION: Chapter 1 Assignments/MICL

COPYRIGHT: *Michael Claudius*

LEVEL: EASY

DURATION: 1 hour

SIZE: 40 lines!!

OBJECTIVE: Introduction to ML basic

REQUIREMENTS: ML Ch. 1

COMMANDS:

ML Chapter 1 Assignments

The following assignments must be solved in groups (4-5 persons) and followed up by a short presentation in the class later.

1. How would you define Machine Learning?
2. Can you name some types of problems where it shines?
3. What is a labelled training set?
4. Name a few common supervised tasks?
5. Can you name some common unsupervised tasks?
6. What type of Machine Learning algorithm would you use to train a robot to walk in various unknown terrains?
7. What type of algorithm would you use to segment your customers into multiple groups?
8. Would you define the problem of spam detection as a supervised learning problem or an unsupervised learning problem?
9. What is an online learning system?
10. What is out-of-core learning?
11. What type of learning algorithm relies on a similarity measure to make predictions?
12. What is the difference between a model parameter and a learning algorithm's hyperparameter?
13. What do model-based learning algorithms search for? What is the most common strategy they use to succeed? How do they make predictions?
14. Can you name a few of the main challenges in Machine Learning?
15. If your model performs great on the training data but generalizes poorly to new instances, what is happening? Can you name three possible solutions?
16. What is a test set, and why would you want to use it?
17. What is the purpose of a validation set?
18. What is the train-dev set, when do you need it, and how do you use it?
19. What can go wrong if you tune hyperparameters using the test set?
